SAVE SPACE AND MONEY

All too often a water heater is allowed to eat up potential living and storage space inside a home. The AquaHut will free usable floor space and save you money. Installed outside the home, the AquaHut is the sensible alternative for permanent relocation of your water heater.

SAFETY MATTERS

AquaHut delivers more than space and cost savings. It delivers peace of mind. If you have an electric water heater and have considered converting to gas, AquaHut makes the switch all the more appealing. Located safely outdoors, there is no need to worry about complicated ventilation systems, gas leaks, or damage to your home's interior caused by a leaky water heater.

AquaHut's design provides the extra confidence you need to make the change and experience the benefits a gas water heater can bring. With an AquaHut and a gas water heater, you will enjoy greater efficiency and lower monthly utility bills without reducing safety.

AquaHut is your answer to added space, safety, and savings. AquaHut is simply the best way to stay in hot water.

SPECIFICATIONS

Exterior surfaces are phosphatized, zinc-coated steel with epoxy resin primer and baked enamel finish.

Available in sizes to house standard 40-gallon and 50-gallon water heaters.
